Integration with eazyBI

eazyBI is a powerful add-on for Jira Server and Jira Cloud, providing easy-to-use drag-and-drop creation of custom reports, charts, and dashboard gadgets. It allows you to import your data from Jira Software, Jira Service Desk, Tempo Timesheets, Xray and other popular add-ons. It also enables you to visualize and analyze all your data using many chart types.

The integration with Xray is available in eazyBI's since version 4.2.

Learn more
For more information, please take a look at eazyBI's documentation, which includes some ready-to-use examples.

- How to use
  - Importing Xray's Data
- Examples:
  - Overall Test Run results
  - Top Defects report
  - Test Burn-Down / Test evolution chart
  - Test Plan Board
    - Test Runs and defects per folder
    - Test Run Statistics
  - Time Tracking
    - Tests estimated time comparison with elapsed time
    - Compare estimated Test time vs Test Run elapsed time, between Test Executions
  - Requirement coverage
- Report Dashboards
- Learn more

How to use
To take advantage of eazyBI features, you don’t need to do anything in Xray. The integration is done at eazyBI's side by processing Xray's internal data; you just need to use an updated version of eazyBI (i.e., 4.2.0 or later).

Importing Xray's Data

eazyBI will automatically detect if you have Xray installed and give you an additional option in eazyBI's Jira Import settings. When you enable it, a few dozen new Xray dimensions and measures will be imported.
You’re also able to import custom fields, such as Test Environments. First, you have to configure the custom field mappings as mentioned in eazyBI’s documentation. In order to obtain the custom fields IDs, go to Jira’s administration > Issues > Custom fields.

Examples

Some of these reports may be available when you install eazyBI.

For the specifics of each report, please see eazyBI’s documentation.

Overall Test Run results

<table>
<thead>
<tr>
<th>Xray Test Run count</th>
<th>PASS</th>
<th>TODO</th>
<th>EXECUTING</th>
<th>FAIL</th>
<th>ABORTED</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>12</td>
<td>1</td>
<td>2</td>
<td>5</td>
<td>3</td>
<td>23</td>
</tr>
<tr>
<td>Xray Test Run count %</td>
<td>52%</td>
<td>4%</td>
<td>9%</td>
<td>22%</td>
<td>13%</td>
<td>100%</td>
</tr>
</tbody>
</table>

Top Defects report
Test Burn-Down / Test evolution chart

Test Plan Board

**Test Runs and defects per folder**

*Aim:* analyse the amount of runs and defects for the Tests contained within each Board's folder.

            }
          },
          "+ arithmetic related tests": 10
        }
      }
    }
  ]
}
```
### Test Run Statistics

**Aim:** analyse the amount of runs per each Test Run status, per each Board's folder.

<table>
<thead>
<tr>
<th>Xray Test Run count</th>
<th>PASS</th>
<th>TODO</th>
<th>EXECUTING</th>
<th>FAIL</th>
<th>BLOCKED</th>
<th>FAIL_DISCARDABLE</th>
</tr>
</thead>
<tbody>
<tr>
<td>CALC-1735</td>
<td>11</td>

}

**Time Tracking**

**Tests estimated time comparison with elapsed time**

**Aim:** compare the sum of estimated time on Test issues vs the actual elapsed time of related Test Runs, with the drill-down possibility to Test level.

This report gives the ability to analyse the Tests of a Test Plan, for example, and related runs. It assumes the duration estimate is implemented by defining the Original Estimated Time on Test issues.

<table>
<thead>
<tr>

  "MinutesFormatter"},

  "Total of Test Original estimate based on test run count","dimension": "Measures",

  "MinutesFormatter"}]

}]

}]
```

**Compare estimated Test time vs Test Run elapsed time, between Test Executions**

**Aim:** compare the estimated time on Test issues vs the actual elapsed time of the corresponding Test Run, on each Test Execution.

This report gives the ability to analyse the Tests and the related Test Executions of a Test Plan, in order to check how the elapsed time of Test Runs evolve from Test Execution to Test. It assumes the duration estimate is implemented by defining the Original Estimated Time on Test issues.
### Requirement coverage

```javascript
// eazyBI report definition

{  
  "cube_name": "Issues",
  "cube_reports": [

Report Dashboards

eazyBI supports the creation of dashboards that you can use to combine several Xray-related reports in one display.

You can also use eazyBI's reports and dashboards in Jira dashboards by using proper gadgets.
