# Quick Setup

After installing Xray, there are basically two steps you need to make or ensure before starting to use it.

Configure Requirements and Defects

In Jira's administration, in the Add-ons tab, go to Issue Type Mapping and configure what issue types should be considered as "requirements" and "defects".

> ⓘ **Learn more**
>
> Refer to the specific Issue Type Mapping page or take a look at the extensive Administration & Configuration if you want to fine-tune Xray or adapt it to your specific needs.
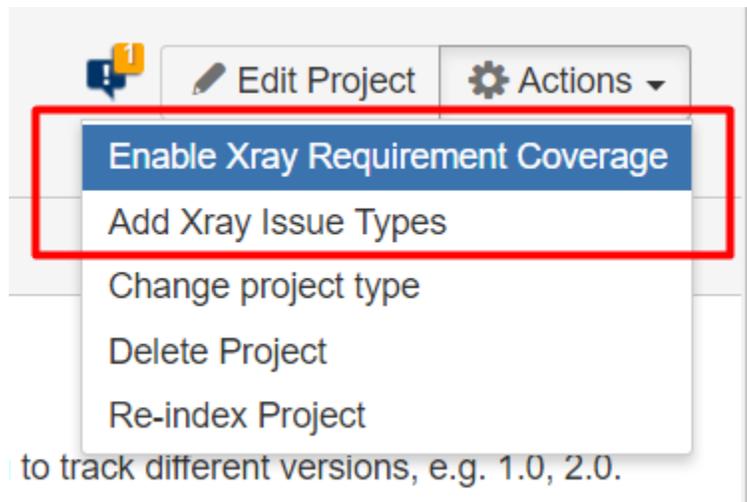

Enable Xray in your projects

You can enable Xray for your existing projects or create a new project with both standard and Xray issue types.

Enable testing in existing projects

For existing projects, in the project Administration page, go to Actions at the top right-hand side. You can either:

a) set your project as a Requirements project by choosing "Enable Xray Requirement Coverage", so the requirements are covered by tests; or

b) add Xray issue types (i.e., Test, Test Set, Test Execution, Test Plan) to the project.

ⓘ **Learn more**

- Configure Jira project to be used as Requirements project
- Configure Jira project to be used as Xray Test Project
- Configuring Xray with an Existing Project

Create new projects from scratch with testing enabled

If, instead, you want to quickly create a new project and use it to manage everything (e.g., requirements, defects, tests), go to the Jira Administration page for Projects. In the creation dialog, choose "Xray Test Project".

Create project

View Marketplace Workflows

SOFTWARE

Scrum software development
Agile development with a board, sprints and stories. Connects with source and build tools.

Kanban software development
Optimise development flow with a board. Connects with source and build tools.

Basic software development
Track development tasks and bugs. Connects with source and build tools.

BUSINESS

Xray Test Project
Create a JIRA project using the Xray default issue types and screen configuration.

Project management

Import a project | Create with shared configuration
